

Medicaid Cuts Are Bad Medicine

Medicaid Is a Boon to Delaware's Economy

In 2005, Delaware will spend nearly \$808 million on Medicaid. Of this, the federal government will contribute more than \$410 million.¹ This \$808 million dollar investment will give Delaware's economy a shot in the arm—stimulating state business activity and creating new jobs. Because Medicaid spending has an economic multiplier effect, each \$1 million that Delaware invests in Medicaid results in more than \$1.9 million in new business activity and nearly 15 newly created jobs.²

Medicaid Is Essential to Delaware's Health Care Infrastructure

A substantial portion of Delaware's health care industry relies on Medicaid spending. Hospitals, nursing homes, and community health centers all depend on the Medicaid funds flowing into them to keep their doors open. In 2002, Medicaid payments infused Delaware's hospital system with more than \$25 million.³ In addition, Medicaid is the primary payer for 60 percent of Delaware's certified nursing facility residents.⁴ Any cut in Medicaid funding will have a profound effect on the economic viability of Delaware's health care system.

Medicaid Offers a Helping Hand to Delaware's Most Vulnerable

In Delaware, Medicaid provided essential health services to more than 124,000 people in 2000. Of these, more than 58,000 were children, nearly 16,000 were people with disabilities, and nearly 10,000 were elderly.⁵ For those in rural Delaware, particularly the elderly, Medicaid provides access to health care that they might otherwise have to go without. Children, people with disabilities, and the elderly—these are Delaware's most vulnerable groups. Ensuring that they have access to health care is the right thing to do.

Medicaid Provides Help in Desperate Times

Medicaid is essential to the security of Delaware and the United States as a whole. In times of need, Medicaid provides a cushion to protect both citizens and the economy. Medicaid is ready to respond to any sort of event—a terrorist attack, economic downturn, natural disaster, or public health catastrophe—that increases the need for health services and disrupts the economy. In the days and weeks following September 11, 2001, Disaster Relief Medicaid came to the aid of nearly 350,000 New Yorkers.⁶ Delaware's security hangs in the balance—will Medicaid be able to respond to such events in the future?

Medicaid Reduces the Number of Uninsured

Any cut in Medicaid funds will leave many Delawareans uninsured. In 2003, the Administration proposed cuts that would have resulted in thousands of Delawareans and other Americans losing coverage and becoming uninsured. The nation's Governors—from both parties—voiced such strong opposition that the proposal was shelved.
